Findings

Distraction Index (DI): Right DI = 0.72, Left DI = 0.67.
 Osteoarthritis (OA): **No radiographic evidence of OA for either hip.**
 Cavitation/Other Findings: No cavitation present.

Interpretation

Distraction Index (DI): The laxity ranking is based on the hip with the greater laxity (larger DI). In this case the DI used is 0.72.
 OA Risk Category: The DI is greater than or equal to 0.70. This patient is at high risk for hip OA.
 Distraction Index Chart:

LABRADOODLE

BREED STATISTICS: This interpretation is based on a cross-section of 7711 canine patients of the LABRADOODLE breed in the AIS PennHIP database. The gray strip represents the central 90% range of DIs (0.31 - 0.76) for the breed. The breed average DI is 0.51 (solid square). The patient DI is the solid circle (0.72).

SUMMARY: The degree of laxity (DI = 0.72) falls within the central 90% range of DIs for the breed. This amount of hip laxity places the hip at a high risk to develop hip OA. **No radiographic evidence of OA for either hip.**
